EXAMINER

BAHTA, KIDEST

ART UNIT

PAPER NUMBER

2125

DATE MAILED: 07/09/2003

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/925,054

Applicant(s)

AGNE, WERNER

Examiner

Kidest Bahta

Art Unit

2125

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 7-12 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 7-12 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on ____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. ____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449) Paper No(s) 4.
- 4) ☐ Interview Summary (PTO-413) Paper No(s). ____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

Priority

1. Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy has been filed in parent Application No. 09/925,054, filed on August 8, 2001.

Information Disclosure Statement

2. The information disclosure statement (PTO- 1449) filed 08/08/200, has been Acknowledged and considered.

Specification

3. Acknowledgment is made for applicant's Preliminary Amendment, filed June 13, 2002, of the substitute specification, Abstract and canceled claims 1-6 and newly added claims 7-12.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 7-8 and 11 rejected under 35 U.S.C. 102(b) as being anticipated by Blumor et al. (U. S. patent 5,757,147).

Regarding claim 7, Blumor discloses a method of preventing damage to a machine (column 2, lines 35-43; column 7, lines 2-5) having at least one drive motor (Fig. 1, elements 2.1 to 2.N), an electrical power supply system for the motor and a motor drive controller for motor (column 3, lines 58-62) composing the steps of:

monitoring the electrical power supply system for the presence and maintenance of the required quality of power (column 4, lines 36-54; i.e., the main control device 6 reads signals from each of the individual drive control devices 5.1 to 5.N the position transmitters 3.1 to 3.n and signal transmitters 4.1 to 4.N and then checks each of the present or absent of the signals and to determine if the device are functioning properly); detecting the present of an unwanted state of the power from the power supply system (column 2, lines 44-65; column 4, lines 55-65; column 6, lines 13-20 and 30-37), transmitting (Fig. 1, element 3.1 to 3.N and 4.1 to 4.N) an indication of the unwanted state in real time to the drive controller (column 2, lines 44-65; column 3, lines 63-column 4, lines 13; column 4, lines 36-54, column 6, lines 21-37; i.e., the main control device 6 also continuously (in real-time) checks the serviceability of the individual drive control device 5.1 to 5.N in addition to the corresponding drive control device 6 also checks for a main power failure using a known power sensing device); the drive controller initiating a drive braking function for the motor, whereby the machine is slowed or brought to stand still (column 5, line 48 to column 6, line 37).

Regarding claim 8, Blumor discloses the machine has at least two drive motors (2.1 to 2.N) and a motor drive controller (5.1 to 5.N) for each motor (Fig. 1), one of the driver controllers having master functionality (Fig. 1, element 6, column 4, lines 14-20), the indication of unwanted state having been transmitted to the drive controller having master functionality (column 6, lines 36-48) further comprising the steps of synchronizing the operation of the at least two drive motors with each other (column 6, lines 5-13), and synchronizing the drive braking function (Fig. 1, element 1.1 to 1.N;

drive control device or of the corresponding rectifier) of the motors in response to an unwanted power supply system state (column 1, lines 7-17; column 4, line 66 to column 5, line 15; column 6, lines 46-51).

Regarding claim 11, Blumor discloses a machine comprising at least two rotating machine elements (Fig. 1, element 1.1 to 1.N; column 6, lines 46-51); synchronizable individual drive controllers for one of the drive controllers having master function, each of the rotating machine element (abstract, column 1, lines 7-17, column 4, lines 14-28; column 5, lines 51-64; column 6, lines 5-13); an electrical power supply system for the machine element (column 3, lines 58-62; column 4, lines 49-53; column 6, lines 14-16 and lines 52-56); a monitor for detecting an unwanted state of the power system (column 4, lines 49-53; column 36-54; column 2, lines 44-65; column 4, lines 55-65; column 6, lines 13-20 and 30-37; i.e., the main control device 6 also continuously checks the serviceability of the individual drive control device 5.1 to 5.N in addition to the corresponding drive control device 6 also checks for a main power failure using a known power sensing device.); a data communication system (3.1 to 3.N and 4.1 to 4.N, i.e., signal transmitters) for transmitting an indication of an unwanted power supply system state to the drive controller having master functionality (column 2, lines 44-65; column 3, lines 63-column 4, lines 13; column 4, lines 36-48, column 6, lines 21-37); the controller having master function communicating the indication to all other driver controllers (column 3, lines 30-32; column 4, lines 14-35 and 49-51; i.e., the main control 6 control the position of the axles of the individual motors 2.1 to 2.N via the individual driver controls 5.1 to 5.); braking means (column 6, lines 46-51) for each of

the rotating machine element responsive to their respective drive controllers for synchronously slowing rotation of the machine element and brining them to standstill (abstract; column 2, lines 44-65; column 5, lines 2-15 and column 51-64; column 13-20).

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 9-10 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Blumor et al. (U. S. Patent 5,757,147) in view of Hamilton et al. (U. S. Patent 6,437,963).

Regarding claims 9-10 and 12, Blumor discloses the limitations of claims 7, 8 and 11 as stated above in Par. 5. In addition, Blumor discloses the machine is a printing machine (title, abstract, column 1, lines 7-10); transmitting an unwanted system state in real time to the drive controller having master functionality (Fig. 1; column 4, lines 14-26 and lines 41-53; column 5, line 34 to column 6, lines 10) and providing this information to other drive controllers via a real-time cross communication (column 4, lines 27-35). However, Blumor fails to disclose the data communication system comprises Ethernet.

Hamilton discloses the data communication system comprises using a real-time Ethernet (column 3, lines 5-8; column 5; lines 49-55; column 9, lines 38-50; i.e., serial communication channels, Ethernet interface or other suitable arrangement).

It would have been obvious to a person of ordinary skill in the art at the time of invention to modify the teaching of preventing damage to a machine as taught by Blumor with the method of using a real time Ethernet as suggested by Hamilton in order to provide various desired working parameters such as power supply intensity, fault level and various important status and information displays to the user through user interface by using Ethernet interface.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
9. Any inquiry concerning communication or earlier communication from the examiner should be directed to Kidest Bahta, whose telephone number is (703) 308-6103. The examiner can normally be reached on M-F from 7:30 a.m. to 4:00 p.m. If attempts to reach the examiner by phone fail, the examiner's supervisor, Leo Picard, can be reached (703) 308-0538. Additionally, the fax phone for Art Unit 2125 is (703) 308-6306 or 308-6296. Any inquiry of a general nature or relating to the status of this application should be directed to the group receptionist at (703) 305-9600.

Kidest Bahta
